With phase-difference detection AF, autofocus is achieved quickly and easily on the camera. With a winning combination of cutting-edge operations and a robust, ergonomic design, it is optimized to make even the most challenging photography simple and easy. The system uses a motor to help reduce the vibrations caused by high-speed shooting. * The number of available AF points, and whether single line or cross-type, varies depending on the lens. Cross-type AF points ensure stable AF that is not influenced by the subject's shape or color. ** In certain countries and regions, the use of GPS may be restricted. Refined mechanics like a newly designed, more efficient shutter-drive motor and a vibration dampened mirror drive mean impressive performance for high caliber image quality, fast. Sophisticated Mirror Control System The EOS 7D Mark II camera employs an advanced mirror vibration control technology that enables the camera to support its speedy, continuous shooting capabilities while ensuring great image quality. And, combined with the predictive power of Movie Servo AF, subjects in motion are smoothly and consistently tracked - once focus is locked, the EOS 7D Mark II holds on! Plus, with the shallow depth-of-field afforded by EOS optics, video gains a brilliant, cinematic ambience lacking with many other Digital SLRs. HD Quality, EOS Performance Stunning Full HD video with custom Movie Servo AF (speed and sensitivity) for continuous focus tracking of moving subjects, multiple frame rates including Full HD recording at 60p in MOV and MP4 formats and uncompressed HDMI out While offering performance improvements across the board for still photography, the EOS 7D Mark II is also an incredibly capable HD movie camera. This feature is useful for minimizing disparities in color and exposure, especially during continuous shooting in sub-optimal lighting situations. In-camera lens aberration corrections To help photographers with achieving high quality images, the EOS 7D Mark II corrects image distortions like peripheral illumination, chromatic aberration and distortion, in-camera, as the image is recorded. Optimized for low-light shooting, the EOS 7D Mark II's sensor captures images at up to ISO 16000 (expandable to H1: 25600, H2: 51200) with remarkably low noise, thanks to its improved, higher sensitivity design. NOTE: For connecting an interface cable to the USB 3.0 terminal, a cable protector is included with the EOS 7D Mark II, and must be used at all times to protect the camera's circuit board. EOS 7D Mark II Body, EF-S 18-135mm f/3.5-5.6 IS STM, Eyecup Eg, Wide Neck Strap EW-EOS 7D Mark II, USB Interface Cable IFC-150U II, Battery Pack LP-E6N, Battery Charger LC-E6, Cable Protector, EOS Digital Solution Disk, Software Instruction Manual From the Manufacturer Fuel Your Creative Passion! The Canon EOS 7D Mark II digital SLR camera is designed to meet the demands of photographers and videographers who want a camera that can provide a wide range of artistic opportunities. Displaying approximately 100% of the composition, the viewfinder can show settings like shooting mode, exposure level, white balance, drive mode, AF operation, metering mode, recording format, even an electronic level and more. This unique AF system enables autofocus on approximately 80% of the image plane, vertically and horizontally, and helps ensure virtually no loss in image quality. It has dual card slots for both CF and SD cards, USB 3.0 connectivity and even has built-in GPS** for easy location tagging, automatically. With a central dual cross-type AF point of f/2.8, AF is enhanced with lenses faster than f/2.8. And thanks to this new system, AF is possible even in dim lighting as low as EV-3. Brilliant, Speedy AF Tracking 65-point* all cross-type AF system for high-performance, accurate subject tracking with EV -3 sensitivity (center point) for focusing in extreme low-light conditions An EOS first, the EOS 7D Mark II features 65 all cross-type AF points* for high precision AF at remarkable speed. * The number of available AF points, and whether single line or cross-type, varies depending on the lens. All of this information can be displayed by or superimposed easily over the image for review while shooting, and multiple views are customizable through the EOS 7D Mark II's simple user interface. Traditionally, image sensors have one photodiode per pixel for recording, but the CMOS sensor on the EOS 7D Mark II has two photodiodes per pixel, 40 million in total, enabling each pixel on the sensor to both perform phase-difference detection autofocus and capture light. Comprehensive Information, Right in the Viewfinder Intelligent Viewfinder II provides approximately 100% field of view for shooting ease The EOS 7D Mark II's Intelligent Viewfinder II makes it easy to both shoot, change and confirm camera settings and shooting modes all without looking away from the viewfinder. Phenomenal for stills, the EOS 7D Mark II's sensor is equally up to the task for movies, delivering Full HD capture even at rates of up to 60p. Dual DIGIC 6 Image Processors The EOS 7D Mark II's sensor works seamlessly with its Dual DIGIC 6 Image Processors for advanced image processing across the board. Click here for larger image The benefits of Dual Pixel CMOS AF are clearly evident in Live View and video shooting, where the EOS 7D Mark II achieves natural, precise focus very quickly, even when switching between subjects. Be particularly careful when traveling outside your home country. Specialty Controls, Built Right In Improved custom controls and built-in intervalometer and bulb timer for expanded creativity An EOS first, the EOS 7D Mark II offers time-lapse fixed-point shooting and long exposures without the need for a remote control. * In certain countries and regions, the use of GPS may be restricted. With super quick AF and exposure systems complementing the shutter's 55 msec shutter release time lag, the EOS 7D Mark II is tailored to meet and even exceed the speed of the action. This advanced technology has truly changed what is possible with a DSLR camera. Displaying fine detail (at approximately 1.04 million dots), this screen is perfect for composing and reviewing images. Speed Improvements Across the Board High speed continuous shooting up to 10.0 fps allows you to capture fast action With a new, rugged shutter designed for 200,000 cycles, the EOS 7D Mark II can shoot up to 10 frames per second to capture all the action. Speed and Accuracy with Intelligent Subject Recognition and Analysis EOS Scene Detection System features a new 150,000-pixel RGB+IR Metering Sensor for improved precision The EOS 7D Mark II has an amazing iSA Intelligent Subject Analysis system that employs an independent RGB light sensor with approximately 150,000-pixel resolution. Thanks to a solid construction between the monitor's resin-coated cover and the liquid crystal display, reflections are minimized, and the display can be viewed with reduced glare. Further, they enable the camera's powerful image processing on-the-fly: lens aberration, variances in peripheral illumination and image distortion can all be corrected in real time thanks to the EOS 7D Mark II's Dual DIGIC 6 Image Processors. Compatible with an ever-expanding collection of EF and EF-S lenses plus a host of EOS accessories, the EOS 7D Mark II is an ideal tool for creative and ambitious photography. The EOS 7D Mark II delivers refined and detailed image quality with Full HD 60P recording at ISO values up to 16000, has an HDMI output and records to both SD and CF cards for versatility and security during important shoots. Additional Features Anti-flicker shooting The EOS 7D Mark II features a new flicker detection system that not only alerts the user in the viewfinder, but with the camera's Anti-Flicker Shooting function can compensate for flickering light sources, taking shots only at peak light volume. Its built-in bulb timer keeps the shutter open for a designated amount of time, perfect for night photography, or to capture the flow of traffic on a street corner. The LCD's surface is treated with a smudge-resistant coating to minimize fingerprints and maintain a bright, clear image display. When shooting in Live View mode, the results of distortion can even be monitored in real time through the EOS 7D Mark II's Image Simulation Function. USB 3.0 The EOS 7D Mark II features a USB 3.0 digital terminal for fast transfer to PCs and printers, plus offers connectivity to Canon's WFT-E7 (Version 2) for wireless transfer and Wi-Fi® compatibility. It shoots up to 10 frames per second at ISOs ranging from 100 to 16000 (expandable to H1: 25600, H2: 51200), has a 65-point* all cross-type AF system and features Canon's amazing Dual Pixel CMOS AF for brilliant Live-View AF. Dual Pixel CMOS AF involves a sophisticated rethinking of the CMOS sensor. Extraordinary GPS, Built-in Built-in GPS* Receiver provides a digital compass, records location information (longitude, latitude, elevation and universal coordinated time (UTC)) as EXIF information for geotagging images when shooting ideal for travel or nature photography, the EOS 7D Mark II's built-in GPS* can record longitude, latitude and altitude data as EXIF data, can track movement at set intervals with its logging function, and can even set the camera's internal clock to local time! When using the logger function on a computer, you will see the exact route you travelled, and the map will show you where and when you took each image. This sensor enables Canon's intelligent Tracking and Recognition system (iTR AF) that detects and tracks subjects, automatically switching the AF point to optimize tracking. For example, the shutter can shoot at speeds up to 1/8000 sec. Sharp and Clear Viewing 3.0-inch Clear View II LCD monitor (approximately 1,040,000 dots) for bright and clear viewing The EOS 7D Mark II comes with a 3.0-inch Clear View II LCD monitor for shooting videos and stills. The EOS 7D Mark II features a refined APS-C sized 20.2 Megapixel CMOS sensor with Dual DIGIC 6 Image Processors for gorgeous imagery. Achieve Impressive AF During Video Capture Canon's innovative Dual Pixel CMOS AF enables you to shoot video like a camcorder with smooth, fast, and accurate autofocus and lets you enjoy instant and precise autofocus even when shooting stills The EOS 7D Mark II features Canon's revolutionary Dual Pixel CMOS AF, a milestone in AF speed and accuracy that unlocks the potential of Live View shooting. On the EOS 7D Mark II, the AF points are spread over a wide area of the frame, enabling faster AF, wherever the subject lies. Built to Perform Magnesium

alloy body with shutter durability up to 200,000 cycles and weather resistanceThe EOS 7D Mark II is constructed of the highest quality materials, and to exacting standards that ensure unfettered performance at all times. These image processors help the EOS 7D Mark II capture up to 1090 JPEG, 31 RAW, and 19 RAW + JPEG shots in a single burst for amazing action photography. Superlative Sensor for Gorgeous Images20.2 Megapixel CMOS (APS-C) sensor and ISO 100–16000The EOS 7D Mark II has a newly designed 20.2 Megapixel sensor that delivers high-resolution image files with stunning detail and impressive clarity. Taking advantage of its Dual Pixel CMOS AF capabilities, the EOS 7D Mark II has customizable Movie Servo AF options: not only can AF location be defined, AF speed and tracking intervals can be specified too, for fluid, smooth focus transitions. As a signal is received from GPS satellites, take sufficient measures when using in locations where the use of electronics is regulated. With new tracking algorithms tailored to recognize faces and colors, this system serves as a brilliant foundation to the EOS 7D Mark II's AF system. By reducing the vibrations, the camera can achieve accurate and precise autofocus to provide steady and clear action shots at up to 10.0 frames per second. Therefore be sure to use GPS in accordance with the laws and regulations of your country or region. This combination makes the EOS 7D Mark II ready for almost anything, for up to 200,000 cycles, the chassis is built of lightweight and rigid magnesium, and the camera's seals are built to resist water and dust. The EOS 7D Mark II's interval timer takes from 1 to 99 shots at preselected intervals, ideal for shooting flowers as they bloom or clouds drifting through the sky.
